"Tintex never gives your clothes a 'dyed' look!"

It produces a clear, even tone, because you use it in the rinse-water *after* your garments are thoroughly cleaned in soapsuds---no dirt is dyed into the fabric; then, too, Tintex comes only in the newest, smartest shades.

As simple as using bluing---dissolve a teaspoonful of Tintex in a bowl full of warm water, dip the delicate garment up and down until you get the shade you want. The original, delicate color restored or changed to the tint that suits you best.

You'll have uniform success with Tintex in tinting silks, satin, crepes, net, batiste, and even wool. Use it just like bluing.

Introductory Offer: Send six cents in stamps to Tintex Company, 175 Fifth Avenue, New York City, for full size 10c package in any desired shade.

Tintex
