HISTORIC AMERICAN BUILDINGS SURVEY

Easter Hill Village, Building No. 46

HABS No. CA-2783-AM

West side of South 28th Street, north of Hinkley Boulevard Avenue

HABS

Richmond

Contra Costa County

California

CA-2783-AM
(page 4)

Location: West side of South 28th Street, north of Hinkley Boulevard Avenue

U.S.G.S. Richmond Quadrangle (7.5'), Universal Transverse Mercator Coordinates: northwest corner 10.4197417.557557; northernmost point 10.4197464.557687; northeast corner 10.4197354.557875; southeast corner 10.4197235.557872; southwest corner 10.4197233.557673.

Present owner: Richmond Housing Authority

Present use: Demolished in 2004.

Most recent use: Public housing project (until late 2003)

Significance: Easter Hill Village has been determined eligible for the National Register under Criteria A and C. Easter Hill is eligible under Criterion A because of its local significance as part of the effort to address the critical Post-World War II housing shortage in City of Richmond. Easter Hill Village was the most significant public effort to provide affordable permanent housing for many families displaced by the demolition of temporary war housing. Easter Hill Village is eligible under Criterion C because it had significant influence on the design of multi-unit housing. Easter Hill Village was the first multi-unit residential development to combine the twin themes of the planned unit development with the individuation of units. The design was also unique for its time in the care given to integrating a multi-unit residential development to its site. Easter Hill Village also is an important design by master architects Donald Hardison and Vernon DeMars, and landscape architect Laurence Halprin. The design of Easter Hill Village had at least statewide, if not national significance and influence. The period of significance under Criteria A and C is 1953 to 1954. The boundary of the eligible resource is the boundaries of the original Easter Hill Village project except Buildings 2, 3, 4 and 6 that have lost their historic integrity.

PART I. HISTORICAL INFORMATION

A. Physical History

Please refer to the "Narrative" report, HABS No. CA-2783.

B. Historical Context

Please refer to the "Narrative" report, HABS No. CA-2783.

PART II. ARCHITECTURAL INFORMATION

A. General Statement

Building 46 is one of forty-one surviving buildings in the Easter Hill Village complex. As originally built in 1953-1954, the complex consisted of forty-eight buildings that were similar in construction, finishing materials, and general architectural character. All buildings were one or two stories in height and consisted of one or more modules that were linked end-to-end. The buildings varied principally in the finish of their second stories and in the number of modules that they contained. (The basic modules are identified on original plans with a letter from A to E; variations indicated by a number suffix, and by the letter "R" for reverse plans.)

Building 46 consists of five modules linked end-to-end. The modules are setback relative to each other, creating a staggered or stepped footprint. These setbacks are defined to a certain extent by Foothill Avenue as it curves to the south. On the original plans, the modules are labeled as (from north to south) modules C-3, C-1, C-1, C-1, and A-2. There are two townhouses in each of the first four modules plus two apartments, one per story, in the A-2 module, for a total of ten units in this building.

Please refer to the "Narrative" report, HABS No. CA-2783, for a description of the elevation, plan, and architectural character of these modules, and of the Easter Hill complex as a whole.

B. Description of Exterior

1. Overall dimensions

Building 46 is two stories in height and 154'-6" in length, from north to south. In its plan, Building 46 is divided into five modules. They are, from north to south, C-3, C-1, C-1, C-1, and A-2. Each of these modules is 26'-0" in depth. The northernmost module, C-3, is set back (west) 6'-6" from its neighboring C-1 module; that module is, in turn, set back the same distance from the three modules to the south. The result is a

staggered composition that is determined in part by the curvature of the street. The C-1 and C-3 modules are 33'-0" in length, and the A-2 module is 22'-4" in length.

2. Foundations

Building 46 has a reinforced concrete perimeter foundation.

3. Walls and structural system

Like all buildings in Easter Hill Village, Building 46 is stud-framed in construction. The second story is clad in a variety of materials. The northernmost (C-3) module is clad in board-and-batten siding; the next module to the south (C-1) is clad in horizontal wood siding; the next two modules (both C-1) are clad in board-and-batten siding; and the southernmost (A-2) module is clad in stucco siding. The first story is clad entirely in stucco. The second story overhangs the first story by sixteen inches in both the east and west elevations, except in the southernmost (A-2) module, which has walls that are flush from the ground to the roofline.

The main façade is along one of the long sides, that facing east. Entrances to seven of the ten units can be found in this façade. A sixth entrance is in the north façade, and the other two entrances are centered, one over the other, in the south façade. The rear of the building is in the other long façade, that facing west. Eight of the units have a back door on this side of the building.

The stucco surfaces are painted salmon-beige and the wooden siding is painted brown. This coloring is not original.

4. Porches

Eight of the ten units in this building possess entrance porches consisting of a concrete deck raised several inches off the ground, and plain wooden railings supported by plain wooden posts. Each porch measures about six feet by eight feet. Metal awnings cover each of the porch decks. On the south side of the building porches can be found in each story, one directly above the other. The upper story porch deck is concrete laid in a steel frame, and is reached via a concrete and steel staircase. These porches and the staircase are non-original.

5. Openings

All exterior doors are wooden hollow core doors, opening inward. Over each door is a security grille with dense metal screen that opens outward.

Both the doors and the security grilles have deadbolt locks. These doors and grilles are non-original.

As is the case elsewhere in Easter Hill Village, all windows in this building are of three types: single windows measuring about three feet in width by four feet in height, paired windows measuring about seven feet in width by four feet in height, and bathroom windows measuring about three and one-half feet in width by two feet in height.

In the main (east) façade, fenestration in the second story consists of twelve paired windows, a single window (at the far north end), and a single bathroom window (at the far south end). The first story contains five paired windows, eight single windows, a bathroom window, and doors to seven units. The doors are adjacent variously to single and paired windows. In the rear (west) façade, the second story fenestration consists of nine paired windows, a single window (at the north end), and four pairs of bathroom windows. In the first story are two paired windows, eight single windows, and six back doors. Each of the back doors is adjacent to one of the single windows. The north façade is nearly symmetrical, with two single windows in each story, plus a central doorway in the first story. In each story of the south façade there is one door adjacent to a single window in each story.

6. Roof

The roof is gabled, with extended eaves. There are breaks in the roofline where modules are set forward or back from each other, creating the impression of three separate roofs on this building. On the south side the roof extends about five feet beyond the wall plane to cover the second story porch. The soffit of the extended roof is wooden. The eaves in this building do not have exposed rafters. Metal gutters run the length of the roof on each of the long facades.

C. Description of Interiors

1. Floor plans

a. Basement

Building 46 contains no basement.

b. Apartment floor plans

From north to south the module floor plans in Building 46 are as follows:

Module C-3 contains two townhouses, a three-bedroom unit on the right (north), and a two-bedroom unit on the left (south). The entrance door in each of these townhouses opens directly into the living room. In each townhouse the staircase to the second floor divides the first floor plan into two primary spaces - a living room in front, and a kitchen area in back. A rear door in the kitchen opens out to the back yard. A storage room opens off of one side of the kitchen. In the second floor, the bedrooms and bathroom open to the landing at the top of the staircase. The bedrooms vary in size from about nine feet by eleven feet to eleven feet by twelve feet.

Module C-1 contains two townhouses. The entrance door opens directly into the living room. The stair to the second floor divides the first floor plan into two primary spaces - a living room in front, and a kitchen area in back. A rear door in the kitchen opens out to the back yard. A storage room opens off of one side of the kitchen. In the second floor, the bedrooms and bathroom open to the landing at the top of the stair. The bedrooms in both units vary in size from about nine feet by eleven feet to eleven feet by twelve feet. The right (west) unit has 3 bedrooms and the left (east) unit has two bedrooms.

The next two modules to the south are also C-1 modules, with the same plan as above.

The southernmost module, A-2, contains two identical apartments, one on each story. In each apartment, the front door opens directly into the living room, which measures about eleven feet by seventeen feet. The living room, in turn, opens through a doorway into the kitchen. A hallway leads from the living room to a bedroom and a bathroom. The bedroom measures about eleven feet by thirteen feet in area.

Each bedroom in the building has its own closet. In the C-1 and C-3 modules a coat closet can be found on the first floor of each unit, beneath the staircase. A linen closet is on the second floor of each unit, near the stairway landing and adjacent to the bathroom. In the A-2 module the coat closet is off of the living room and the linen closet is at the end of the hallway, near the hallway.

2. Flooring

Floors are covered with non-original twelve-inch vinyl tiles.

3. Wall and ceiling finish

Please refer to the "Outline" report for Building 8, HABS No. CA-2783-A.

4. Openings and trim

Please refer to the "Outline" report for Building 8, HABS No. CA-2783-A.

5. Doors to bedroom and linen closets, storage rooms

Please refer to the "Outline" report for Building 8, HABS No. CA-2783-A.

6. Kitchen fixtures

Please refer to the "Outline" report for Building 8, HABS No. CA-2783-A.

7. Bathroom fixtures

Please refer to the "Outline" report for Building 8, HABS No. CA-2783-A.

8. Lighting and heating fixtures

Please refer to the "Outline" report for Building 8, HABS No. CA-2783-A.

D. Site

1. General setting and orientation

Building 46 is on the west side of South 28th Street, a short distance north of Hinkley ^{Avenue} Boulevard. A large parking lot can be found directly to the north, and a small one is to the south. Many boulders can be found at both the north and south ends of the building, and many others are distributed west of the building (that is, west of the back yards, not in them). Please refer to the "Narrative" report, HABS No. CA-2783 for more on the general setting at Easter Hill Village.

2. Historic landscape

See the "Narrative" report, CA-2783.

PART III. SOURCES OF INFORMATION

A. Original Architectural Drawings

The original 1953 Easter Hill Village plans and specifications are on file at the architectural firm of Hardison, Komatsu, Ivelich & Tucker, 538 Ninth Street, Suite 240, Oakland, CA 94607.

B. Interviews

Hardison, Donald. Personal communication with Marjorie Dobkin. January 2003.

_____. Personal communication with Ward Hill and William Kostura.
October 2003.

Please refer to the "Narrative" report, HABS No. CA-2783, for more interviews.

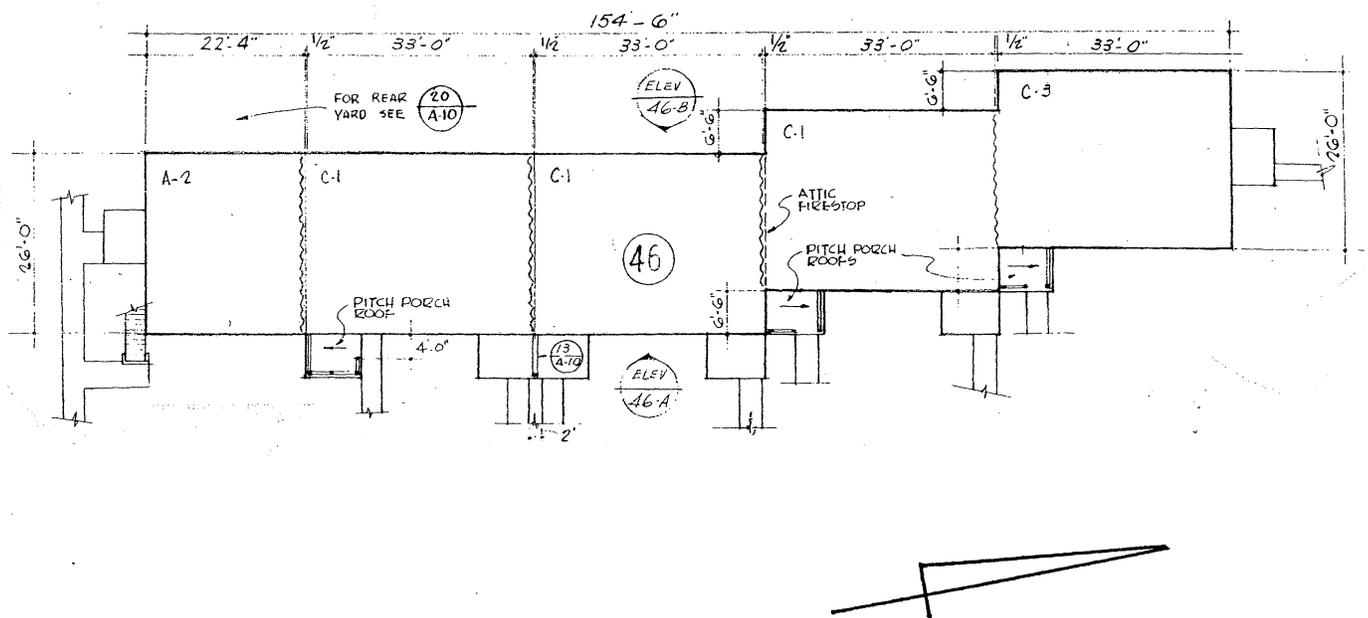

C. Bibliography

Please refer to the "Narrative" report, CA-2783.

PART IV. PROJECT INFORMATION

The Historic American Building Survey documentation was undertaken as a mitigation measure as per the Memorandum of Agreement between the Richmond Housing Authority and the California State Office of Historic Preservation. The City of Richmond Housing Authority as part of the Hope VI Revelopment Project demolished forty-one (237 units) buildings of the existing forty-five buildings in the Easter Hill Village complex (including removing existing landscape features) in May 2004 for the construction of 219 new multi-family rental-housing units, thirty for-sale detached houses, and fourteen for-sale town-homes would be developed. On a vacant site just east of Easter Hill Village, an additional forty for-sale detached houses would be developed. A total of 303 new housing units will be constructed as part of this project.

The documentation was prepared during the period of October 2003 to July 2004. The narrative report is a collaboration of three individuals: Historian Marjorie Dobkin prepared the sections on social history regarding Richmond during and after World War II and on Easter Hill Village and the section on the history of the Easter Hill Village design; Landscape historian Denise Bradley prepared the description and historic background sections on the Easter Hill Village landscape design and the biographical material on landscape architect Lawrence Halprin; Architectural historian Ward Hill prepared the sections on the Modern Movement in architecture, the Bay Region Tradition and the general historical background of the City of Richmond. Architectural historian William Kostura prepared the Outline Format reports on the forty-one individual Easter Hill Village buildings (original building numbers 8 to 48) demolished for the project.

Sketch plan for Building No. 46, showing the arrangement of modules. For module plans, please refer to the "Narrative" report, HABS No. CA-2783.
