

My name is Billy de Fretes. I'm a system analyst in my company. Currently my iPhone status is jailbreak. The reason I jailbreak my iPhone is, there's a lot of networking stuff that being provided in the Cydia that can help my work. Like ping, arp, netstat. So I can run a test into my network without using PC. So jailbreak give a freedom for me to not using PC for some times. iPhone default is less powerful before jailbreak. No just for networking but a lots of things can be done with jailbreak iPhone. So please keep jailbreak legal.
