Legalization of "Jail breaking" Consoles and continuation of legalization of "jail breaking" Apple Devices

3 and 5

The jail breaking of apple devices such as iPods, iPhones and iPads does nothing but help the makers of the devices by letting the users adjust the devices further than the original system would allow. Jail breaking itself does not do anything that would cause the makers of the devices to lose any money. Adjusting the visual effects and removing certain restrictions to the device that have no purpose other than to limit the device's usefulness allows the device to be used by many more people who can adjust it to their liking and preference, and if this was applied to consoles such as Xbox 360, PS3, and the Wii, I don't see any reason this would change, as the developers of the products can limit what jailbreaks can and cannot do with their systems, while still allowing for further adjustment to the users preference further than the consoles already give.
