### Proposed classes of works #3

#### Why I/you want to jailbreak a device. (iPhone)

Freedom! Is this not the number one issue.

I bought it, it is mine now. You the company cannot tell me what I can and cannot do with my purchase.

Simple fix for the company, do not sell them anymore and your companies problem is gone.

I believe in an open market.

By not letting people free (jailbreak) their devices is a violation of freedom and creates a monopoly.

#### Example 1

I just bought a new stereo receiver; I thought I wonder if I could make it louder or up the radio frequency. Pioneer or Sony or Denon do not care that I have done this, until I claim a warranty issue. Knowing that the device has been tampered with, I understand the reason they would not honor the warranty, so I would not try to claim this as their fault.

#### Example 2

I just bought a car. I want to customize the stereo, paint, rim, window color, etc... The Car manufacture would never say that this voids your warranty. Because I did not touch the transmission, engine, etc...

If I had touched the transmission, engine, etc., I would not expect them to honor it, but it would be nice if they did.

Yes, this may possess a security risk possibly to the user. If buying from an untrusted place, person, but that is their freedom to make that discussion.

There is a large community of people like myself that benefit from developers new ideas that are released. Programs that the original company may have put on hold. My first complaint is the lack of security on most devices. These developers make it so that your device is completely locked down from the average person. You hand you phone to somebody to look at something, there is minimum restrictions set in place to protect your privacy. With these programs developed by third party developers, I can feel safe and free to hand my device to you, knowing that you are locked out of things that I do not want you to see. (bank info, contacts, web, mail, etc) without having to buy a limited application to try to achieve and keep all my data in that application to get the same end result. Which can not be done without a jailbreak.

Because companies limit the normal applications to fit their needs, not ours. Lockdown pro, iProtect, Applock, and others, can lock; folders, separate applications, all applications, and more. This is not sold by the iTunes store but by Cydia. This is where the problem is for companies like apple. They are not PROFITING from it. How much money do they really need. Is billions not enough.

Most of these apps or devices are not imposed by the company until they see that the underground community has been making money off of the ideas. That is when you will see it on the next release of the official product. This then eliminates the need for the third party developers apps, but that may take 3 years. So in the meantime your product is running customized the way you like it and suits your needs today, don't forget the security and protection that you benefit from while waiting for companies like Apple to implement it as their own, without giving credit to the original underground developers.

So you can see that if there was to become a law against jail breaking, I would miss out on extended security features that reach far past the manufactures, I would not be able to use about 45 plus tools and customizations that have been created by the third party developers. That I have paid for and enjoy using. Who is getting hurt here?

Should we not be asking ourselves, why is my cell phone bill so high! They have been around for over 20 years. The cost of the service should not be going up or even staying the same. Is my service better then it was in the 90's? They should be a lot more competitive. Someone should be regulating this.  
MONOPOLY! That is completely backwards.

Please keep our freedoms safe.
