

Ever since I got my first iPhone I've been fascinated with all the technology is put into Apple products, and all the features of iOS. But some aspects of the operating system have always been too constricting. Jailbreaking has allowed me to change the aspects of the phone, and customize it the way I want. Not the way Apple has forced their features upon us, the users. As a long time Jailbreaker, and still being at a young age. Jailbreaking my iOS device has been a great learning experience, opening doors to learning about the file system and how to make themes for the phone.

From gaining root access to the file system, I have learned a lot about iOS and how it works. From changing certain little aspects of my Phone to completely changing every icon to the way I want it. Being part of the younger generation, I'll be able to carry this knowledge into jobs, and maybe even make a career out of it. Technology is advancing at a very fast rate, and we'll need a lot of programmers and developers in the future, and Jailbreaking has let me get a head start in that aspect.

The iPhone screen uses very bright blue light for its display, and that has always been hard on my eyes. iOS doesn't have anything to fix the lighting, but Jailbreaking my phone lets me change the lighting to more of a candle-light like display. Just download a little tweak called F.lux and you can change the lighting to anything you would like. Having the ability to do that has helped me a lot.

Finally, Jailbreaking has let me fix all the annoyances of iOS. For example, frequently I use my iPhone as an alarm clock, and when the alarm goes off it not only rings but vibrates. It would vibrate its way right off my desk sometimes, and Apple has never put an option to disable that. With Jailbreaking, I've been able to disable that feature, and save my phone from falling off the desk almost every day.

In conclusion, Jailbreaking is very helpful, and shouldn't be made illegal. It has taught me about the iPhone file system and how it works, put less strain on my eyes, and has even saved my phone from falling off the desk. So please decide against forcing us to do everything Apple's way, and let us, the people, decide what's best for us and our phone.
