Victrola to be fixed. In a few minutes it went away singing. Then a heavy tractor lumbered in towing a great 155mm. G.E.F. gun which had been put out of action.

As it went away a general's car drove up and the general himself got out. "Captain," he said, "I have lost a little screw out of my eyeglasses, and I am helpless without them. Is there any way you can fix them?" There was. "That will do," said the historian, closing his notebook.

ORDNANCE'S WORK FOR VICTORY

Continued from Page 1

Some of the notable work of the Ordnance Department was done in arming planes. The aircraft armament shops were at Orly and Romorantin, the two airplane assembly plants of the A.E.F.

Another contribution of our ordnance to airplane warfare was a parachute dropping device, which was used to drop food, supplies and ammunition to troops in the trenches.

The Ordnance Department had well in hand the production of a standard American parachute for the use of aviators in jumping from their planes, but none were ever used by us in the Army and Air Force.

There should be also mentioned the American emergency dropper furnished to the planes by which our aviators could take any kind of an Allied bomb on their bombing expeditions.

The Ordnance Department had well in hand the production of a standard American parachute for the use of aviators in jumping from their planes, but none were ever used by us in the Army and Air Force.

To their credit it should be said, in conclusion, that this program was carried through by a little band of 1,803 officers and 12,205 enlisted men, whose work was as hard as any in the Army and Air Force, even if in the S.O.S. According to the schedules of requirements the ordnance force of the A.E.F. should have been 2,145 officers and 35,330 enlisted men, while the program for July 1, 1919, called for 3,454 officers and 70,550 enlisted men.

The history of our ordnance is the history of success in a race between hunkies and American brains and energy, and therefore one in which we can all take pride.
