

**Mountaineering in the Canadian Alps.**  
 Three Americans conquer the peaks of the Rockies where beauty sits  
 "on a throne of rocks, in a robe of clouds, with a diadem of snow."

The explorers' camp, at the base of the glacier at the head of Sand Creek, near Tete Jaune, Alberta.

Dr. Andrew J. Gilmour, a New York physician, among the crevasses at the foot of Mount Whitehorn. Dr. Gilmour was accompanied by E. W. D. Holway, professor of botany in the University of Minnesota, and Howard Palmer, of New London, Conn., secretary of the American Alpine Club.

The two unnamed peaks in the distance were first ascended by Professor Holway and Dr. Gilmour, who, with Mr. Palmer, have just returned from their second excursion into the unexplored fastness of the Caribos. They made their first trip in 1915.

Bridges over the Fraser River were washed out, and the party had to cross on a log jam.

Trees were felled to serve for bridges where the river torrents could not be forded.

Mount Longstaff, on the right, was ascended for the first time last summer by the American party. The unnamed peak on the left was conquered in 1915.

Snow bridges often afforded the only means of crossing the gorge in the Donkin Pass region.

A sea of unnamed, unmapped peaks in the Caribos, photographed

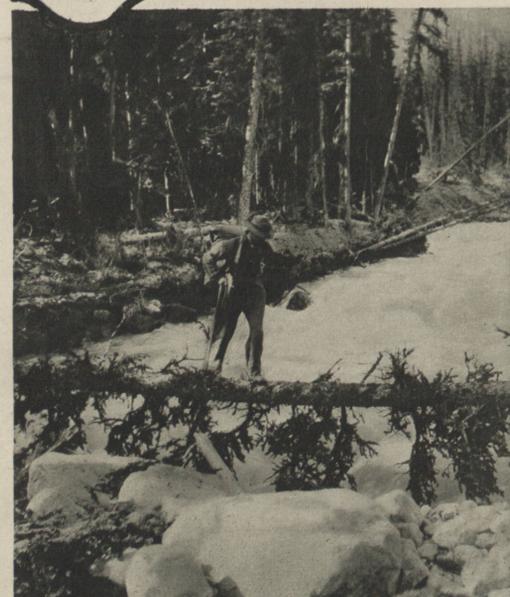

from the top of the unnamed mountain at the end of Sand Creek Valley.

The insecure footing on undermined snow bridges called for caution. A slip would have meant a dangerous tumble onto snow covered rocks far below.

The Northwest arrete of Longstaff, which turned back the explorers 100 feet from the top in 1915.

The summit of Mount Longstaff was reached July 27, 1916, through this pass, after the party had tried unsuccessfully, the year before, to ascend its other side.

The police barracks near Tete

for the exploration of the glaciers at the head of Sand Creek. Back packing was necessary every step of the long way.

Jaune served as a supply base

The Fraser was spanned near Jasper by a makeshift bridge laid over the debris of the one which had been swept away by the high waters of the spring season.
